Education

University of Washington

Bachelor of Science, Computer Science, Dean's List

Seattle, WA

Aug 2023 – June 2027

Pierce College Fort Steilacoom

Associate of Science, General Transfer, Dean's List

Lakewood, WA

Sept 2021 – June 2023

Experience

Software Engineering Project | *Perfect Pair, Spark Program*

Aug 2026 – Sept 2026

- Contributed to Perfect Pair's nonprofit volunteer platform through Spark, working alongside a team building a TypeScript, Next.js, and Firebase application for managing volunteer events and resources.
- Designed and implemented a document ingestion pipeline that detects new and modified Google Drive resources and normalizes Docs, Sheets, Slides, and PDFs into Markdown for downstream search and chatbot retrieval.
- Built a Cloudflare Workers pipeline using scheduled jobs, Queues, R2 object storage, and D1 metadata to process documents independently and persist synchronization state.
- Designed idempotent updates and failure tracking using Drive file IDs, database upserts, sync statuses, and error logging to prevent duplicates and surface failed document processing.

Student Technician

Oct 2024 – Present

University of Washington

Seattle, WA

- Diagnose and resolve hardware, software, audiovisual, and connectivity issues across production classroom systems used by students and faculty.
- Troubleshoot technical failures under time constraints, identifying root causes and restoring classroom technology while minimizing downtime.
- Maintain, test, and support computers, displays, projectors, audio equipment, and related campus technology infrastructure.
- Collaborate with technicians on campus-wide maintenance workflows and equipment logistics while assisting with onboarding and training new team members.

Projects

Intimo Y Casual | *TypeScript, Next.js, Firebase, Tailwind CSS*

June 2025 – Present

- Developed and deployed a bilingual e-commerce platform used by real customers to browse products, manage accounts, and place orders.
- Implemented Firebase authentication, authorization, data storage, and security rules to securely manage users and customer orders.
- Integrated a WhatsApp-based ordering workflow to streamline customer communication and reduce manual order coordination.

GlobeGram | *TypeScript, React Native, NestJS, PostgreSQL, AI*

Jan 2025 – Mar 2025

- Designed backend services and REST APIs supporting itinerary creation and management for a multi-user travel application.
- Developed AI-powered recommendation logic using user location, budget, and travel plans to generate personalized suggestions.
- Integrated Google Maps APIs for location-aware itinerary visualization and GitHub Actions for automated testing and deployment.

Flights | *Java, Azure, SQL Server, PostgreSQL*

Mar 2024 – June 2024

- Designed and implemented backend services supporting flight search, filtering, and database-backed application workflows.
- Optimized database queries and indexing strategies, improving search performance by 40%.
- Applied object-oriented design principles to develop a maintainable backend architecture.

Technical Skills

Languages: Java, Python, C, C++, TypeScript, JavaScript, SQL

Frameworks: React, Next.js, React Native, Node.js, NestJS, Tailwind CSS

Data / Cloud: PostgreSQL, SQL Server, Firebase, Cloudflare Workers, R2, D1, Azure, AWS

Tools: Git, Linux, REST APIs, GitHub Actions, CI/CD, Google Drive API, GDB
